- Warm and inviting effect to luxuriate on
- 97% renewable and natural mineral materials
- Repels dirt and water
- Resists sweat and saliva
- Certified for healthy room environment
- DIBt-Parquet Standard and Nature Plus certified

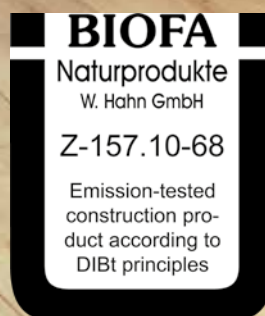

### Where to use:

BIOFA Parquet Oil Special is perfect for wood, cork, plywood and other absorbent materials.

# Oil from Nature ...

Non Layer-Forming oils are solvent-free but require a rotating plate floor polishing machine to work the oil into the floor. They saturate the wood surface, but remain a thin layer. Non Layer-forming surfaces are more easily repaired where needed. Both types yield similar durable, open-pored surfaces that enhance the room environment. The solvent free BIOFA Parquet Oil Special was developed by engineers, who love to lie on the floor. The natural ingredients are combined to create a durable surface for bare- or shod feet. Regardless of how your boards were installed, they become warm and inviting. The natural patterns in the wood grain are enhanced and the floor looks alive!

# Oil from Nature ...

Layer-Forming oils can be applied with a brush, roller or other traditional method. They are typically painted layer upon layer. Both types yield similar durable, open-pored surfaces that enhance the room environment.

These oils from BIOFA were developed by engineers with active children for durability and a healthy environment. The natural plant ingredients bring a living aura to a functional floor. The waxes are dirt and water repellent. The more flexible oils help protect the wood.

The three finishes, together with many priming options offer an almost limitless range of effects. These products will satisfy your needs.

## Layer-Forming Oils in three finishes

Hard Wax Oil mat 2033

Universal Hard Oil semi mat 2044

Hard Wax Oil semi-gloss 2055

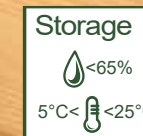

BIOFA offers three different finishes to suit your pleasure: matt 2033, silky matt 2044 and silky gloss 2055. The durable surfaces from any of these three compatriots are ideal for leather shoes, tennis shoes, dog paws and rubber tricycle wheels.

- Made with natural and renewable materials
- Low emission for a health room environment
- Resists sweat and saliva
- Repels dirt and water
- Low propensity for yellowing

### Where to use:

These three oils are suitable for wood, cork, plywood and other absorbent materials. To add beautifully living colors to the floor, prime them with BIOFA Color Oil 2110 before applying the layer-forming oil.

## BIOFA Color Oil farblos und farbig, für innen

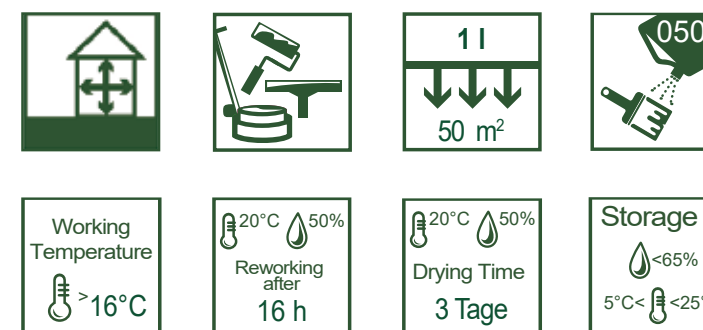

Clear offers extra strength and durability to a floor. The natural pigments of the colored primer bring nature into the home. Together with the finishing oils, they add harmony and balance to your home environment.

- Low emission for a healthy home climate
- Breathable surface lets you interact with your wooden floor.
- Can be mixed up to 10% with the finishing oils for deeper, more intense effects.
- Fulfills the requirements for the international Standard DN EN 14342 Parquet Floors.

### Where to use:

BIOFA's Color Oil Primer can be used with all the BIOFA floor oils.

## Scandinavian Style Wood Treatment The Natural Look and Feel

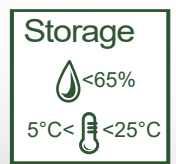

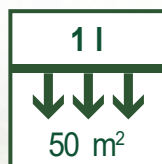

### Where to use:

Lyes and Soaps offer natural floor surfaces that look and feel untreated, but are protected from yellowing. The "system" allows for frequent refurbishing, every time the floor is cleaned!

The 2-step process begins with the lye that prepares the wood and starts the protective processes. The soaps follow, cleaning the floor and providing a protective surfacing.

- Amazingly easy to use!
- Leaves the surface breathable and allows you to "feel" the natural ambience.
- The finished floor is lighter than oiled floors and hardly yellow over time (yellowing is primarily from the oils)
- The floors are not particularly durable and require refurbishing. But the result makes it well worth it. Also, every time you clean with the soap, you are refurbishing the floor! The floor becomes more durable with each cleaning!
