Interior surfaces

of cupboards and drawers

For wood protection or aesthetics, it is advisable to treat the wood inside the cabinet as well. But be careful with oils: We generally advise against treating with oils, as you can make serious mistakes.

Oil should only be applied very sparingly to the inside of a cabinet. The cabinet must then be left open in a well-ventilated place for at least four weeks. This is the only way to allow enough light to enter and, above all, enough oxygen to circulate to allow the layer of oil applied during the treatment to harden completely.

If the oil is applied too thickly or you do not have the opportunity to leave the cabinet open long enough to dry after the treatment, a very unpleasant musty odour can develop, which can be detected even after a long time.

Quick-drying and odourless shellac or wax varnishes are therefore particularly suitable for protecting the inside of a cabinet and maintaining an easy-care wooden surface.

Wood refinement shellac-based

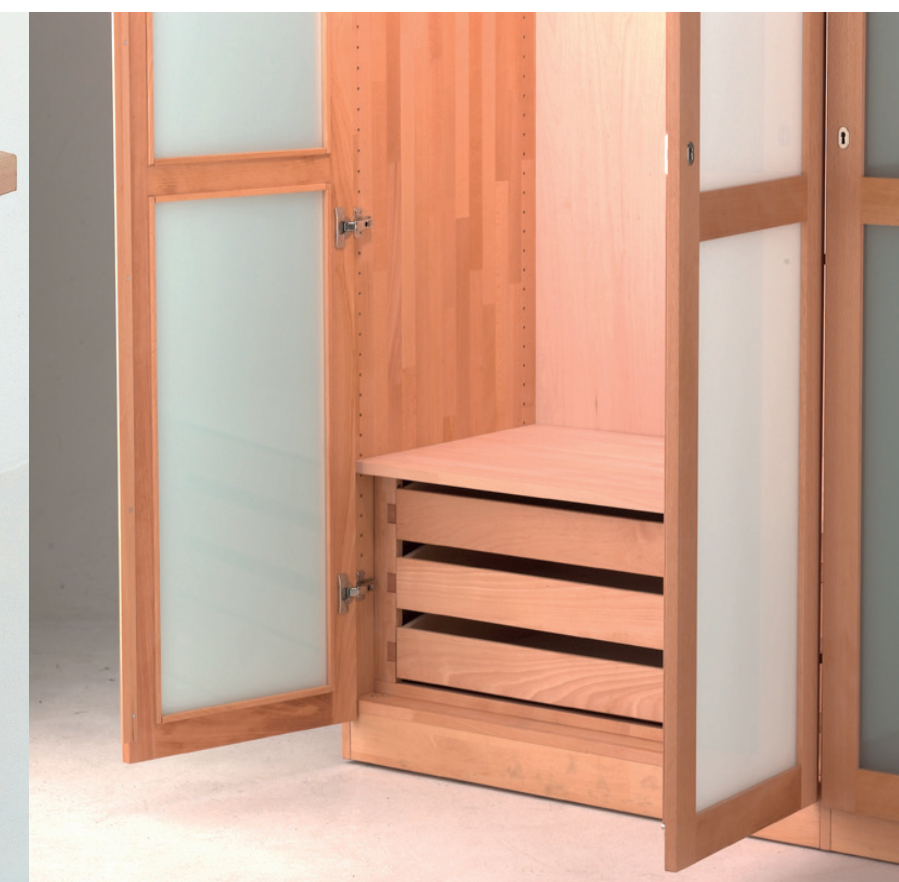

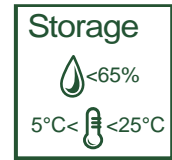

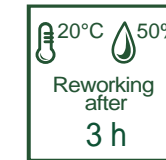

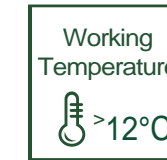

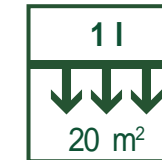

BIOFA Natural Shellac Refiner 5005 is a solvent-free, water-dilutable, colourless wood treatment made from natural raw materials. Shellac consists of purely natural raw materials that are excreted by a special type of lice. BIOFA Natural Shellac Refiner is odourless, is used as a primer and top coat and is very suitable for allergy sufferers and odour-sensitive users.

The Natural Shellac Refiner dries very quickly, saturates the wood well and produces transparent, glossy surfaces with limited resistance to stains, abrasion and scratches. It is suitable for all untreated types of wood and wood-based materials in interior areas such as furniture, interior doors, picture frames, wall and ceiling panelling and children's toys.

Due to its neutral odour and very fast drying time, the Natural Shellac Refiner is particularly suitable for cabinet interiors and drawers.

- Crystal Clear Ingredient Declaration (www.biofa.de)
- low-emission
- made from natural raw materials
- 100% renewable and mineral ingredients
- colorless and diffusible
- low odour
- very fast drying
- water-dilutable
- saturating and levelling
- Meets En 71,3 and 9 (safety of children's toys)

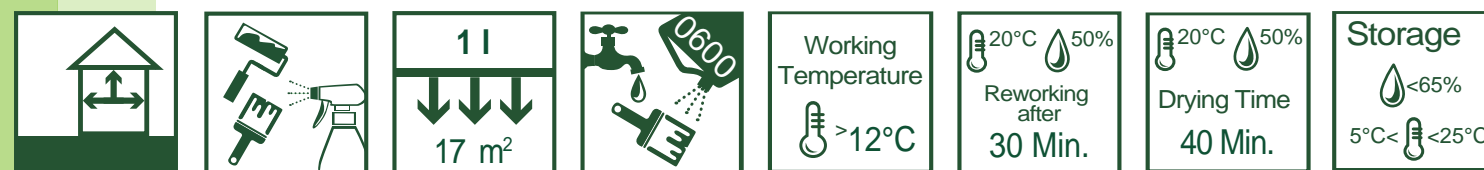

Color Wax

colorless and colored

- Crystal Clear Ingredient Declaration (www.biofa.de)
- Made from natural raw materials
- Low-emission and odourless
- very fast drying
- 97% renewable and mineral ingredients
- colorless 2087 and colored 20871
- semi glossy
- Breathable and non-yellowing
- dirt and water repellent
- sweat and saliva resistant
- Meets En 71,3 and 9 (safety of children's toys)

BIOFA Color Wax 2087, 20871 is a natural wax varnish made from renewable raw materials without harmful additives. It protects and enhances untreated wooden ceilings, wood panelling, beams, picture frames, shelves and furniture surfaces. Due to its neutral odour and very fast drying, Color Wax is particularly suitable for cabinet interiors and drawers. Color Wax produces diffusible, silky-gloss surfaces and complies with the EN 71 standard, parts 3 and 9 (safety of children's toys).

To increase the gloss level of surfaces treated with Color Wax, the surfaces can be polished manually or mechanically with a lint-free cloth or white pad. A final application of colorless Color Wax, which is also polished, enhances this effect.

Color Wax can be tinted in many colours according to the BIOFA FILUC color chart.
