

Stone Oil 2100, 21001

Stone, Tile, Cement, Terracotta : everyone wants to be taken care of.

Helps to keep your mineral based floors in tip bottom shape!

- Highly elastic and durable surface helps maintain floor strength
- Seals unglazed surfaces and prevents water and dirt from causing permanent discoloration.
- The colored versions offer UV protection.
- For interior use or in weather protected conditions.
- Breathable and antistatic finish, allows your floor to equilibrate with the indoor environment.

BIOFA Stone Oil 2100, 21001

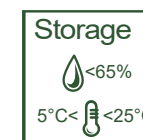

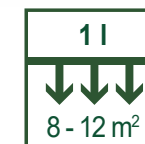

- Silky gloss finish that creates warmth and depth.
- Repels water and dirt
- Generates a beautifully warm and cozy room environment
- Available in countless harmonious color variations

Water is generally not a floor's best friend. Water damages organic materials, but also causes discoloration in mineral surfaces, such as terracotta tiles, cement, etc. With water comes dirt - deep down into the porous floor materials.

BIOFA Stone Oil is made from plant oils that have been cooked together in a proprietary process that yields a durable yet elastic surface. Use it on terracotta, stone, bluestone, cement and other mineral surfaces to protect them from short-term water damage.

Long-term exposure to water will damage the natural oils and resins in Stone Oil. Avoid areas exposed to rain, snow or splashes from a swimming pool or pond.

Oil from Nature ...

The BIOFA Stone Oil was developed by engineers, who love the cooling and warming effect of a stone floor, while enjoying a plate of antipasti and a glass of Chianti! The plant oils and resins maintain much of their natural properties. The room balancing effect of Stone Oil brings harmony and well-being to the indoor environment.

MINERAL SURFACES

The Perfect Primer for Stone Oil is BIOFA Universal Primer 3754

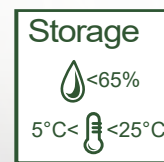

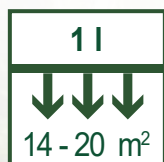

Use BIOFA Universal Primer on highly absorbent materials to strengthen the floor to surface bond and increase the floor's durability. It is great for high traffic areas.

- And yet, the primer is open pored, allowing the floor to breathe and improve the interior environment
- It penetrates deep into the substrate
- It evens out irregularities in the surface appearance
- It helps repel water.

When strong is not enough

we have stronger! The BIOFA Universal Primer is an all-purpose product to strengthen the bond between substrate and oil. The unique combination of botanical oils and resins are cooked with our proprietary process to create chemical bonds in the product and double bonds on the surfaces for that high durability.
