WOHNGESUND & NACHHALTIG

Varnish Renewal Aqua

for interior and exterior

- maintains varnished wooden surfaces and refreshes them
- brings back the original color depth, brilliance and gloss

A close-up photograph showing a person's hand applying a white, creamy substance from a container onto a dark brown wooden surface. In the background, a glass window is covered in numerous small water droplets, suggesting a humid or rainy environment. The overall scene conveys the application of a protective wood treatment.

Woodcare

made from nature...

Coated wooden elements in the outdoor area are exposed to great stress due to weathering. In order to maintain the protection permanently, regular care and maintenance (once or twice a year) should be ensured. BIOFA Varnish Renewal Aqua is a solvent-free, water-based, colorless and transparent care emulsion for exterior and interior varnish coats. When used regularly, it extends the renovation intervals and thus the service life of the coatings in exterior areas.

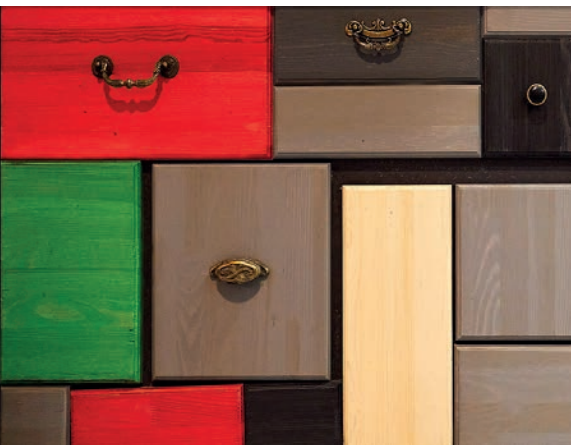

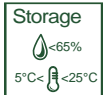

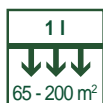

BIOFA Varnish Renewal Aqua

- Fully declared and low emission
- Made from natural raw materials
- 96% renewable and mineral ingredients
- Water-dilutable
- Transparent, semi-gloss
- Permeable
- Antistatic, dirt- and water-repellent
- Care, maintenance and refreshing in one step
- Easy to apply with cloth or brush

Areas of application:

For BIOFA varnish series 1075/1001, 5201/52011 and 8101/81011.
